**Purpose:** Every time the government presents the statistics, they show a further increase in the number of elderly people with dementia. Family caregivers who nurse elderly people with dementia at home experience significant anxiety and a sense of being burdened during their nursing life, which has the potential of continuing for an extended period. However, nursing conditions and circumstances differ in each family. Moreover, the attitude towards nursing could very well be different for each individual providing nursing. This research aims to investigate the relevancy between the attributes of caregivers and their awareness of supporting their elderly parents.

**Methods:** This research was conducted on family caregivers of homebound elderly with dementia. Prior to the investigation, consent was obtained from the hospital director, nurses and clinical psychotherapists after explaining the purpose of the research and ethical considerations. The relevant candidates suitable for the subject of this research were recommended by the director of the hospital. Prior to the investigation, ethical considerations were explained to the recommended research subjects, upon which their consent was obtained. For the investigation, researchers were to go to hospitals cooperating in the research, and fill in the corresponding survey form while the research subjects answered the questions. The items of survey includes age and gender of the family caregiver, number of siblings, (family) relationship to the elderly with dementia, educational background, marital status, employment status, income status, religion, thoughts on spiritual subjects, presence/absence of mental disease and dementia in other family members, and the awareness of supporting the elderly parents. The relevancy between the basic attributes of the subject and the awareness on supporting old parents were analyzed through a t-test and one-way analysis of variance.

**Results:** There were 43 subjects analyzed, within which 14 of them were male and 29 female. The average age was 59.67 years old (standard deviation: 10.528), ranging from 36 to 79 years old. The number of siblings ranged from 0 to 3, with 2 being the most, counting 19 subjects. In terms of theirs relationships, 13 were spouses, 22 were sons or daughters, 4 were sons- or daughters-in-law, and 4 were classified as “other”. For educational background, 24 were junior-high graduates, 19 had education higher than high school. In terms of their marital status, 4 were single, 36 married, 1 divorced, and 2 bereaved. For employment status, 10 were unemployed, 15 worked full-time, 4 part-time, 2 temporary workers, and
12 retired. For income status, 2 felt highly insufficient, 13 insufficient, 23 just right, 3 fairly sufficient, and 2 fully sufficient. In terms of religion, 13 had no particular religious faith, 27 were Buddhists, and 3 were classified as “other.” As for thoughts on spiritual subjects, 36 had no interest, and 7 “had some.” In terms of the presence/absence of mental disease and dementia in other family members, “none” were 36 and 35, “yes” 7 and 8 for each disease, respectively. The relevance between the individual attributes and their support of elderly parents showed a significant difference in only one condition. The condition was for the category of family relationship, between “sons or daughters” and “sons- or daughters-in-law,” in which “sons- or daughters-in-law” was significantly higher. As a result of the split application on the relevancy between the attributes of the caregivers and the supporting of the elderly parents, “sons- and daughters-in-law” were significantly higher than “sons and daughters.” This is possibly because when someone who has high awareness in supporting old parents to begin with gets in the position to nurse, even if they were “in-laws,” they accept the position of caregiver within their position in the family relationships. It may be that even if they are not related by blood, they adopt the role of caregivers because the population has a high awareness of supporting elderly parents.

Conclusion: This research investigated the relevancy between caregivers’ attributes and their awareness of supporting their elderly parents. As a result, the attributes “sons or daughters” and “sons- or daughters-in-law” in the family relationship category were the only attributes that exhibited statistically significant relevancy. The analysis for this research was conducted with a limited amount of data. The relevancy to attributes regarding the family caregivers’ awareness of supporting elderly parents in households with homebound elderly with dementia needs to be ascertained in the future in light of the results of this research.

Title:
Awareness of Supporting Elderly Parents by Family Caregivers in Households With Home-Bound Elderly With Dementia

Keywords:
Awareness of Supporting Elderly Parents, Elderly with Dementia and Family Caregivers

Abstract Summary:
This research aims to investigate the relevancy between the attributes of caregivers and their awareness of supporting their elderly parents. This research investigated the relevancy between caregivers’ attributes and their awareness of supporting their elderly parents.

Content Outline:
This research aims to investigate the relevancy between the attributes of caregivers and their awareness of supporting their elderly parents.

The items of survey include age and gender of the family caregiver, number of siblings, (family) relationship to the elderly with dementia, educational background, marital status, employment status, income status, religion, thoughts on spiritual subjects, presence/absence of mental disease and dementia in other family members, and the awareness of supporting the elderly parents. The relevancy between the basic attributes of the subject and the awareness on supporting old parents were analyzed through a t-test and one-way analysis of variance.

As a result, the attributes “sons or daughters” and “sons- or daughters-in-law” in the family relationship category were the only attributes that exhibited statistically significant relevancy.

First Primary Presenting Author
**Primary Presenting Author**
Keiko Matsumoto, PhD, RN
Kawasaki University of Medical Welfare
Professor
Kurashiki
Japan

**Professional Experience:** Professor Matsumoto also has involved in many research projects as a primary investigator and co-investigator such as KAKENHI, Grant-in-Aid for Scientific Research (A) and (C) from Japan Society for the Promotion of Science. She works as a review committee member at several journals such as Journal of Japan Society of Nursing Research and Japan Journal of Nursing Science. She is a president of the Japan Nursing Care Society.

**Author Summary:** Professor Matsumoto is a professor of the Department of Nursing, Kawasaki University of Medical Welfare. She teaches undergraduate, master and doctoral graduate programs related to Home Care Nursing, Gerontological Nursing, and Family Nursing. The main research interests are the successful aging of elderly and the issues related to the family care giver with elderly people with dementia who living at home.

Second Secondary Presenting Author
**Corresponding Secondary Presenting Author**
Misae Ito, PhD, MSN, RN
Kawasaki University of Medical Welfare
Department of Nursing, Faculty of Health and Welfare
Professor
Kurashiki
Japan
**Professional Experience:** Professor ITO is a vice-director and professor at the Department of Nursing, Kawasaki University of Medical Welfare, and teach at the undergraduate, master, and doctoral graduate programs about fundamental nursing, nursing ethics and nursing theory. The research interests are the issues related to nursing ethics, family nursing, and an international comparison. I have worked with several grants as a primary investigator and co-investigator such as KAKENHI, Grant-in-Aid for Scientific Research (C) from Japan Society for the Promotion of Science. I have work as an editorial committee member of the Japan Society of Nursing Diagnosis since 2004. I am also a member of the board of trustees of the Japan Society of Nursing Diagnosis since 2011 and Japan Society of Nursing Research since 2014. I am an Asia Region Coordinator, Sigma Theta Tau International, since November, 2015.

**Author Summary:** Professor ITO is a vice-director and professor at the Department of Nursing, Faculty of Health and Welfare, Kawasaki University of Medical Welfare, and teach at the undergraduate, master, and doctoral graduate programs about fundamental nursing, nursing ethics and nursing theory.

Third Author

Claudia Kam Yuk Lai, PhD, RN, FAAN
The Hong Kong Polytechnic University
School of Nursing
Honorary Professor
Hong Kong SAR
China

**Professional Experience:** 2018 Jan - Jun -- Part-time faculty, School of Health Sciences, Macao Polytechnic Institute 2017 Sep - Present -- Visiting Professor, School of Nursing, The Hong Kong Polytechnic Institute 2017 Feb- Apr -- Project Professor, Division of Health Sciences and Nursing, Graduate School of Medicine, Faculty of Medicine, The University of Tokyo 2017 - present -- Honorary Professor, School of Nursing, The Hong Kong Polytechnic University 2010 - 2016 -- Professor, School of Nursing, The Hong Kong Polytechnic University 2004 - 2014 -- Associate Professor, School of Nursing, The Hong Kong Polytechnic University 1996 - 2004 -- Assistant Professor, School of Nursing, The Hong Kong Polytechnic University 2002 - 2003 -- Examiner, Nursing Council of Hong Kong 1999 - present -- Clinical Assessor, Nursing Council of Hong Kong 1996 -- Clinical Nursing Specialist, Baycrest Hospital, Baycrest Center for Geriatric Care, Toronto, Canada

**Author Summary:** Dr. Lai is Honorary Professor at Hong Kong Polytechnic University and Visiting Professor at the Yangzhou University. She was co-founder of the Global Leadership Mentoring Community. She is Director of the Centre for Gerontological Nursing, School of Nursing, The Hong Kong Polytechnic University, a member of the National Hartford Centers of Gerontological Nursing Excellence. She has served as a Regional Coordinator for Asia Global Region (2013-2015). She is a member of Pi Iota Chapter.

Fourth Author

Daphne Cheung, PhD, RN
The Hong Kong Polytechnic University
School of Nursing
Research Associate Professor
Hong Kong

**Professional Experience:** Daphne Cheung (PhD, MSc in Clinical Gerontology, BN, RN) works as a Research Assistant Professor, School of Nursing, The Hong Kong Polytechnic University. She studies elderly people with dementia. She was invited to overseas lecture activity in the training of dementia.

**Author Summary:** Daphne Cheung (PhD, MSc in Clinical Gerontology, BN, RN) Research Assistant
Professor, School of Nursing, The Hong Kong Polytechnic University. She carries a role to adjust the foreign countries information between researchers to in this study.

Fifth Author
Siok Bee Tan, PhD, RN
Singapore General Hospital
Nursing
Ag Deputy Director, Nursing
Singapore

**Professional Experience:** She is an Ag Deputy Director, Nursing. She works as a nurse in The Singapore General Hospital (Bowyer Block B Level 2, Nursing Division Singapore). She piles up a lot of experienced experience for a nurse.

**Author Summary:** She is an Ag Deputy Director, Nursing. She works as a nurse in The Singapore General Hospital. She studies elderly people with dementia. She announces it at an overseas academic meeting in a study of dementia. She carries a role to adjust the foreign countries information between researchers to in this study.

Sixth Author
Yasuyo Kametaka, MS, RN, PHN
Kawaswaki University of Medical Welfare
Nursing
Master's students
Kurasiki
Japan

**Professional Experience:** She is a master student of the health nursing specialty of Kawasaki University of Medical Welfare (Okayama, Japan). She is going to complete a master student this year. Her study is a study on role of the family of need of nursing care elderly people. She has the experience as the nurse for approximately five years. In her nurse experience five years two years of the home health care is engaged.

**Author Summary:** She is a master student of the health nursing specialty of Kawasaki University of Medical Welfare. She is going to complete a master student this year. Her study is a study on role of the family of need of nursing care elderly people. She has the experience as the nurse for approximately five years. In her nurse experience five years two years of the home health care is engaged.

Seventh Author
Yoshimi Tsunekuni, MS, RN
Kansai University of Social Welfare
Nursing
Assistant professor
Ako
Japan

**Professional Experience:** She is a master student of the health nursing specialty of Kawasaki University of Medical Welfare. She is going to complete a master student this year. She works as an assistant instructor now in Kansai University of Social Welfare. Her study is a study on communication of mother of children with disorder. She has the experience as the nurse more than ten years. She has the experience as the teacher of nursing, too.
**Author Summary:** She works as an assistant instructor now in Kansai University of Social Welfare. Her study is a study on communication of mother of children with disorder. She has the experience as the nurse more than ten years. She has the experience as the teacher of nursing, too.

Eighth Author

Sadao Katayama, PhD, MD
Katayama Medical Clinic
Director of a hospital
Kurashiki
Japan

**Professional Experience:** He is doctor of medicine (PhD.). He is a specialist of patients with dementia. He works as a director now at a clinic. There is the experience as his physician more than 30 years.

**Author Summary:** He is doctor of medicine. He is a specialist of patients with dementia. He works as a director now at a clinic. There is the experience as his physician more than 30 years. There is plurally him in scientific presentation of the results of the study in international Alzheimer's disease societies.

Ninth Author

Masafumi Kirino, PhD, SW
Okayama Prefectural University
Faculty of Health and Welfare Science
Associate Professor
Soujya
Japan

**Professional Experience:** He assumes the study on family caregiver of need of nursing care elderly people specialties. He works as an associate professor specialized in social welfare studies now in Okayama Prefectural University. There is the experience as his teacher more than ten years. There is plurally him in scientific presentation of the results of the study in various societies about the social welfare. Also, he posts a lot of original reports on a specialized learned book.
