# TABLE OF CONTENTS

About the Author ............................................................... vii
Introduction ........................................................................ xiv

1 **De-Escalation for Holistic Wellness** .............................. 1
   The Three Interventional Pathways for Aggression .............. 2
   Response Tools ............................................................... 4
   The De-Escalation Process ............................................... 5
   Assess the Situation ........................................................ 6
   Implement Safety Measures .............................................. 7
   Apply De-Escalation Techniques ...................................... 7
   After the Incident: Debriefing, Reporting, and Documenting 8
   Working With Family Members and Caregivers ................. 9
   References ......................................................................... 11

2 **Variables and Risk Factors for Aggression** ................... 13
   Patient Variables ............................................................ 15
   Environmental Variables ................................................ 16
   Caregiver Variables ........................................................ 18
   Patient and Caregiver Interaction Variables ...................... 20
   Other Risk Factors ........................................................ 20
   References ......................................................................... 25

3 **Assessing an Escalating Situation for Early Intervention** ... 29
   The Aggression Continuum and the Escalation Cycle .......... 30
   The Assault Cycle ........................................................... 34
   Triggers of Aggressive or Violent Behavior ....................... 36
   Escalating Behaviors ....................................................... 39
   Assessing Patient Behavior for Signs of Agitation .......... 41
   The Importance of Early Intervention ............................... 42
   References ......................................................................... 42

## TABLE OF CONTENTS

### 8 Crisis Intervention

- Stages of Crisis Development ................................................. 104
- Common Crisis State Behaviors ........................................... 105
- Types of Crises ................................................................. 106
- Three Phases of Crisis Intervention ...................................... 107
- The Importance of Communication During a Crisis .................. 109
- References ........................................................................ 110

### 9 Managing Mental Health Emergencies

- Common Mental Health Emergencies ..................................... 115
- Performing an Emergency Mental Health Assessment ............. 116
- Aiding the Suicidal Patient .................................................. 118
- Aiding the Patient Suffering From Alcohol or Substance Abuse .. 119
- Aiding the Violent Patient .................................................... 121
- References ........................................................................ 124

### 10 Performing a Mental Status Assessment

- Performing a Legal Status Assessment ................................. 128
- Assessing the Patient’s Physical Appearance ....................... 128
- Evaluating Alertness, Orientation, Behavior, Attitude,
  Affect, and Mood .............................................................. 129
- Analyzing Thought Processes, Thought Content, Attention,
  Concentration, and Memory ............................................ 132
- Appraising Judgment, Insight, and Intellect .......................... 134
- Noting Hallucinations and Delusions .................................... 134
- Assessing Speech and Motor Activity .................................. 135
- Additional Mental Status Assessments ................................. 137
- Performing a Risk Assessment ............................................ 137
- Formulating a De-Escalation Plan ....................................... 143
- References ........................................................................ 146

### 11 De-Escalation of Patients With Mental Disorders

- Assessing and De-Escalating Patients With Schizophrenia .... 150
- Assessing and De-Escalating Patients With Bipolar Disorder ... 154
- Assessing and De-Escalating Patients With Major
  Depressive Disorder ......................................................... 157
- Assessing and De-Escalating Patients With Panic Disorder ..... 159
- Comparing Conditions ....................................................... 163
- References ........................................................................ 166
