MaryLou Graham, MSN, RN  
*School of Interdisciplinary Health Sciences, University of Saint Joseph, West Hartford, CT, USA*

The University in New England and a Hospital in Georgetown Guyana South America share a commonality through the Sisters of Mercy. Faculty from the Nursing Department began working collaboratively with the nurses at the Hospital and the attached Nursing School and that tradition continues. The authors are both educators and, by training, a doctorally prepared critical care nurse and a psychiatric nurse practitioner respectively. When approached by local Government and Pan American World Health Organization leaders with a request for a sustainable nurse led program we set to work.

In low income countries obtaining continuing education and supplies is a long term challenge (Noel, 2001; O’Brien, Broom, Ulla, M., 2015). The research on knowledge transmission in these countries has yet to identify one overall strategy for success (Santesso & Tugwell, 2006; Tuxbury & and McCauley, 2015). Training the healthcare resources in place is a lower cost/higher yield proposition. Train the trainer (TTT) models are one way for Guyanese nurses to achieve sustainable educational and practice results to bridge the practice and evidence gap (Santesso & Tugwell, 2006). WHO knowledge management strategy 2. Vision, mission and objectives (2005) champions an approach which identifies needs in the country, builds capacity that is targeted to the current state of development, focuses on driving improvement in health services and requires collaborative work with partners.

Nurses are tasked with working to prevent and treat serious diseases of the body and mind and promote well-being in that population. World Health Organization (WHO) Sustainable Development Goal 3: Ensure healthy lives and promote well-being for all at all ages. (Target 3.4) is a one third reduction in premature mortality from non-communicable diseases through prevention and treatment and promote mental health and well-being by 2030. Having highly trained nurses in more than half of the regions will support achievement of this goal. The indicators of progress include 3.4.1 Mortality rate attributed to cardiovascular disease, cancer, diabetes or chronic respiratory disease. 3.3.2 Suicide mortality rate.

The CEOs of Guyanese regional hospit...
representing six of the ten regions of the country. After completion of BLS, ACLS, and the final exam, 13 of 15 students earned a certificate of completion.

It was the plan that the program would be transferred to local authorities and the student graduates will become the Nurse Leaders for the next cohort of students thus promoting sustainability and the strengthening of clinical knowledge and practice. However, the stakeholders did not feel ready to accept such responsibility so we will change roles and be co-leaders again strengthening sustainability, global connections and inter-professional collaboration.

Title:
Developing a Nurse-Led Critical Care Course in a Low Income Country Highlights Global Collaborations

Keywords:
Critical Care/ Mental Health Collaboration, International Relationships and Vulnerable Populations

References:

Abstract Summary:
The objective of the project was to create a sustainable nurse-led critical care course in the low-income country of Guyana, SA. As nursing faculty leading service-learning trips, we forged partnerships with the Pan American Health Organization and the Ministry of Public Health to achieve their identified goal.
Content Outline:
Creating a Sustainable Nurse-Critical Care Course in a Low-Income County

I. History of Presence in Guyana

II. Forming Reciprocal Relationships
A. Government Agencies (Ministries of Public Health and Education)
B. Non-Government Organizations

III. Identifying Critical Care Nurse Leaders within Guyana
A. Traveling and Interviewing Nurses where they live (Interior Regions)
B. Setting Expectations and Outcome
C. Earning Trust of Hospital Administrators
D. Planning Sessions with Hospital Administrators and Ministry Representatives throughout Regions to Facilitate Travel Expenditure Reimbursement

IV. Creating the Learning Platform for 30-Week Program
A. Home University Approval
B. Creating a Platform to Enhance Learning from Multiple Perspectives
C. Integrating Mental Health and Critical Care Topics into each Weekly Module

V. Process
A. Student/ Nurse Preceptors Outcomes Clearly Stated
B. Clinical Practicum Hours Articulated
C. Class Time Hours Articulated

VI. Evaluation
A. Weekly Reflections
B. Weekly quizzes
C. Clinical Check-lists
D. Mid-term and Final Exam
First Primary Presenting Author

**Primary Presenting Author**

Janet Knecht, PhD, RN  
University of Saint Joseph  
School of Interdisciplinary Health Sciences  
Associate Professor of Nursing/ Chair Department of Nursing  
West Hartford CT  
USA

**Author Summary:** Janet was a critical care clinical nurse specialist for twenty years before becoming a faculty member almost ten years ago. She has been working with senior nursing students in an undergraduate nursing program in central CT. She has developed pedagogy related to service learning both in her community and globally working with the Pan American Health Organization in South America. Janet is now working to advance Interprofessional Education on a global platform.

Second Author

MaryLou Graham, MSN, RN  
University of Saint Joseph  
School of Interdisciplinary Health Sciences  
Assistant Professor of Nursing  
West Hartford CT  
USA

**Author Summary:** MaryLou is a Psychiatric Nurse Practitioner with over 30 years of experience treating patients with issues in mental health. She maintains a private practice in tandem with her role as professor at the University of Saint Joseph.
