Collaboration Outcomes

- Early identification and prevention of patient deterioration and escalation of care
- Use of EWS and proactive approach to reduce failure to rescue (FTR) and eliminate out-of-ICU arrest
- Improvement in early recognition and management of patient deterioration
- Enhanced ability to provide simulation and education
- Early recognition and management of patient deterioration
- Clearly defined mission, vision, and goals accompanied by education throughout organization

Sustainability

- Development of Visiting Clinical Nurse Scholars
- Consistent benchmarking of metrics
- Networking initiatives
- Mentorship opportunity
- Establishment of Visiting Clinical Nurse Scholar Program
- Development of quarterly international video conference
- Annual CCOT symposium
- Consistent benchmarking of metrics
- Creation of local chapter of International Society of Rapid Response Systems (ISSRS) in progress

Methodology

- Development of patient care algorithms
- Establishment of CCOT recommendations and competencies
- Prioritize early recognition and management of patient deterioration
- Demonstrated ability to provide consistent, efficient care
- New specialty evolving from traditional Rapid Response Systems
- Analysis of metrics to expand and direct practice
- Identified need to shift paradigm from reactive to proactive approach
- High developed resource for interprofessional engagement
- Interprofessional collaboration to improve communication and leadership during emergencies
- Use of Early Warning Scores (EWS) and proactive algorithm to promote early detection of patient deterioration and escalation of care
- Incorporation of simulation and education into practice
- Interprofessional collaboration to improve communication and leadership during emergencies
- Development of Visiting Clinical Nurse Scholar Program
- Quarterly international video conference
- Annual CCOT symposium
- Consistent benchmarking of metrics
- Creation of local chapter of International Society of Rapid Response Systems (ISSRS) in progress

Background

To Improve Critical Care Outreach

Mobilizing the Power of Global Collaboration

- Establishment of Visiting Clinical Nurse Scholars
- Consistent benchmarking of metrics
- Networking initiatives
- Mentorship opportunity
- Establishment of Visiting Clinical Nurse Scholar Program
- Development of quarterly international video conference
- Annual CCOT symposium
- Consistent benchmarking of metrics
- Creation of local chapter of International Society of Rapid Response Systems (ISSRS) in progress

Purpose

- Promote early recognition and management of patient deterioration
- Clearly defined mission, vision, and goals accompanied by education throughout organization
- Early identification and prevention of patient deterioration and escalation of care
