Title:
The Factors Associated With Advance Care Planning Among People With Mild Cognitive Impairment

Keywords:
advance care planning, end-of-life care and mild cognitive impairment
References:

Abstract Summary:

People with mild cognitive impairment have lower awareness of symptoms and treatment regarding end-stage dementia. They also are insufficient awareness of existing ACP and advance directives. This presentation will provide rich information regarding advance care planning intervention for people with mild cognitive impairment.

Content Outline:

mild cognitive impairment, advance care planning, end-of-life care, Patient Autonomy Act
