Purpose:
Develop and implement xxxxxxx for newly hired xxxxxx

Methods:
Provision of quarterly didactic live educational and simulation sessions for all newly hired xxxx. Quarterly didactic sessions include the following live presentations: Medication Safety; Revenue Integrity (billing basics); Coding and Documentation Information; PEWS and the Decompensating Patient; and a general Overview of Organizational xxxx and Resources. Simulation sessions include: didactic education, demonstration and practice of basic airway management skills; code cart review; and simulation of a decompensating pediatric patient. Pre and post evaluations of presented didactic content to determine usefulness of information for newly hired staff. Pre and post confidence evaluations and a debrief evaluation for the skills and simulation sessions.

Results:
Five didactic sessions included 24 participants. During, these five session 42% of participants strongly agreed and 53% participants agreed that overall the xxxx was effective and preparatory for their role. 100% of participants agreed the xxxx welcome and overview information was useful. Fourteen participants commented that the billing and/or coding education was the most valuable part of the didactic orientation and two participants reported all the topics were helpful. There were 16 participants for the 4 simulation sessions. Overall, there was evidence of increased confidence after the simulation and skills session completion. Specific areas evaluated included: appropriately intervening for a child in distress and confidence in finding emergency equipment. Eighty- eight percent of the participants reported the session provided a realistic and practical learning experience. All participants agreed the simulation session enhanced their ability to perform as a first responder to a child in distress. Comments for naming two things that will change your practice after the simulation and skills session included; "Improve communication. Be more confident in responding", importance of communication and identifying a leader" and "putting a sicker patient in a room with oxygen. Will check where closest code cart is".

Conclusion:
Although this is a small sample size, early evaluations of the new xxxxxx program, point to both the didactic content and simulation session as being a useful and informative program for newly hired xxxx.
Title: Advanced Practice Provider Centralized Orientation in a Pediatric Healthcare System

Keywords: onboarding, orientation and simulation

Abstract Summary: Newly hired advanced practice providers attending a recently implemented centralized orientation program in a pediatric health care system report that the didactic education provides useful information for onboarding. Advanced practice providers' confidence is increased after participation in the decompensating pediatric patient simulation and skills based orientation session.
