The purpose of this was to understand the health status, healthy lifestyle, activity, perception of health, and health services between Baby Boomer Women and Elder Women in Korea. Through the data, all learners will be able to recognize health behaviors of baby boomer women and elderly women in Korea. In addition, the learners will be able to have knowledge about culturally diverse health behaviors of the two groups at Korea.

**Health Status**

- **Baby Boomer Women**
  - Chronic disease: 77.2%
  - Eye problems: 37.5%
  - Difficulty chewing: 23.9%
  - Medication of depression and suicidal thought: 18.1%
  - Little bit feeling of anxiety and depression: 45.2%
  - Stress to their task: 4.5%

- **Elderly Women**
  - Chronic disease: 93%
  - Eye problems: 24.1%
  - Difficulty chewing: 23.7%
  - Medication of depression and suicidal thought: 8.3%
  - Little bit feeling of anxiety and depression: 4.5%
  - Stress to their task: 19.8%

**Healthy lifestyle**

- **Baby Boomer Women**
  - Toothbrushes of snack: 78.3%
  - History of smoking: 66.3%
  - 3 meals /1 day: 23.7%

- **Elderly Women**
  - Toothbrushes of snack: 80.6%
  - History of smoking: 88.6%
  - 3 meals /1 day: 2.9%

**Activity**

- **Baby Boomer Women**
  - No vigorous & moderating physical activity / 1week: 22.2%
  - No walking problems & daily activities / 1day: 89.5%

- **Elderly Women**
  - No vigorous & moderating physical activity / 1week: 43.1%
  - No walking problems & daily activities / 1day: 78.3%

**Perception of health and health services**

- **Baby Boomer Women**
  - Frequency of clinic visit (negative feeling) / 1 year: 86.7%
  - Frequency of dental clinic visit / 5 years: 58.1%
  - Positive thought of routine exams: 49.6%
  - Perception of incident of cancer within 10 years: 45.7%
  - Perception of incident of cancer in life: 28.6%

- **Elderly Women**
  - Frequency of clinic visit (negative feeling) / 1 year: 84.3%
  - Frequency of dental clinic visit / 5 years: 51.7%
  - Positive thought of routine exams: 43.1%
  - Perception of incident of cancer within 10 years: 43.1%
  - Perception of incident of cancer in life: 24.4%

**Conclusion**

These results could be fundamental information to understanding of comprehensive health conditions for baby boomer women and elderly women in Korea. Therefore, all of the information will allow the women and nurses to take these strategies into consideration so that the women maintain health.

This work was (partially) funded by the Sigma Theta Tau International Honor Society of Nursing Lambda Alpha Chapter-at-Large in 2014.
