

Innovative Use of Technology to Change Nursing Practice

Presented by

Jeanine M. Rundquist DNP RN NEA-BC,
Director of Performance, Practice and Innovation

Diedre Bricker MSN RN CRRN CPHIMS,
Innovations and Outcomes Specialist

Kathleen Bradley DNP RN NEA-BC,
Director of Professional Development

Children's Hospital Colorado

Nursing Staff:

2000+ RNs

300 APRNs

BSN & Higher Rate: 90%

Certification Rate: 47%

Admissions: 14,000

Outpatient visits: 600,000

Magnet Designations:

2005, 2011, in review 2015

Located in Aurora, Colorado

Anschutz Medical Campus

17 Network of Care sites

Objectives

At the end of this symposium, the learner will be able to:

1. describe how to utilize technology to enhance nursing practice and project tracking.
2. describe the benefit of providing real-time nursing quality data

Using SMART Technology to Measure Nursing Practice at the Organization, Unit, and Individual Levels

Presented by

Jeanine M. Rundquist DNP RN NEA-BC
Director of Performance, Practice and
Innovation

Electronic Auditing Tool

- Electronic auditing tool
- Improvement in efficiency and effectiveness
- Addition of observational auditing
- Significant improvement in bundle compliance for:
 - Hospital-acquired Pressure Ulcers (HAPU)
 - Peripheral IV Infiltrate/Extravasation (PIVIE)
 - Central line associated blood stream infections (CLABSI)

Care Bundle – Pressure Ulcers

Bundle Trigger	Pressure Ulcer: Perioperative Procedural Patients and Inpatients (Excluding NICU)					
Bundle Elements	Perform Braden Q risk & skin assessment	Apply Mepilex Border sacral dressing	Specialty bed	Reposition patient every 2 hours	Reposition movable devices and pad devices that cannot be moved	Offload pressure
Process Steps	<p>• Complete Braden Q and skin risk assessment on</p> <ul style="list-style-type: none"> • Admission • Transfer • Every shift <p>Perioperative Procedural Patients</p> <ul style="list-style-type: none"> • Preoperative skin assessment • Postoperative skin assessment • Also consider intra-operative skin assessments in procedures longer than 3 hours, unless risk outweighs the benefit 	<p>• Sacral dressing indicated for patients 3 years of age or older AND one of the following</p> <ul style="list-style-type: none"> • High Risk (Braden Q 16 or less) • Moderate Risk (Braden Q 17 – 22) AND unable to purposefully offload pressure <p>• Change dressing every 3-4 days and as needed for soiling</p> <p>Perioperative Procedural Patients</p> <ul style="list-style-type: none"> • Sacral dressing indicated for • High risk patients (Braden Q 16 or less) • Procedures over 3 hours 	<p>High Risk Patients (Braden Q 16 or less)</p> <ul style="list-style-type: none"> • Identify which mattress is appropriate for your patient, using Specialty Bed Algorithm • Use one sheet and one disposable Airflow chux pad under your patient while on the specialty bed 	<ul style="list-style-type: none"> • Reposition patient from their left side to supine to right side every 2 hours if patient not able to purposefully offload pressure • May use repositioning aides such as pillows or Z-flos to help reposition 	<ul style="list-style-type: none"> • Rotate moveable devices (pulse oximetry probes, blood pressure cuffs, etc) from extremity to extremity • Every 4 hours for high risk patients (Braden Q 16 or less) • Once per shift for moderate risk patients (Braden Q 17-22) • Pad devices that cannot be moved (C-collars, trachs, etc) with Mepilex or Duoderm • Ensure patient is not lying on tubes or lines • Do not secure an IV access device with Coban <p>Non-invasive Ventilation (NIV) (CPAP / BiPAP)</p> <ul style="list-style-type: none"> • Apply Cavilon and Mepilex Lite over nasal bridge and forehead to exceed the size of the mask or prongs • Remove mask and Mepilex Lite to inspect the skin once per shift • Alternate two mask types or sizes every 6 hours when on continuous CPAP/BiPAP 	<p>Z-flo/Gel positioners</p> <p>Use for</p> <ul style="list-style-type: none"> • Concerning bony prominences • Under the occiput in infants or toddlers • To keep devices such as ventilator tubing from resting on the patient • Use gel positioners in perioperative areas only <p>Mepilex Border</p> <ul style="list-style-type: none"> • Place over • Any persistent blanchable erythema • Stage 1 pressure injuries (non-blanchable erythema) • Concerning bony prominences not otherwise protected • Change dressing every 3-4 days and as needed for soiling

Care Bundle - PIVIE

Bundle Trigger

PIV (Peripheral Intravenous Line) Extravasations: Presence of a PIV (Maintenance)

Bundle Elements

Securement

Assessment

Patency

Process Steps

Site Visible

- Insertion site must be visible at all times

Securement

- A transparent dressing covers the IV site
- A padding may be used under the hub of the T-connector
- A clear IV house, bandnet or stockinette may be used to cover the site
- An arm board may be used to assist with stabilization in areas of flexion
- Never secure an IV device with Coban and/or Coflex
- Never use circumferential taping

Discuss in daily rounds/care

- Necessity of line
- Type of line
- Integrity of line
- Change IV medications to PO

Frequency (Patient awake and asleep)

Every hour

- Continuous fluids
- Medication administration greater than (1) hour

Every (4) hours

- Use of intermittent IV medications and fluids
- PIV not in use

Assessment Components (TLC)

Touch

- IV should feel: soft, warm, dry and pain free

Look

- IV site should be: uncovered, dry and without redness

Compare

- IV site should be: same size as other side and without swelling

Flushing Frequency

Every (4) hours with 1-3mL of normal saline

- Intermittent IV infusions
- PIV not in use
- Anytime patency of line is in question during infusion of continuous fluids or medications

Care Bundle - CLABSI

Bundle Trigger

CLA-BSI (Central Line Associated Blood Stream Infection): Presence of a Central Line (Maintenance)

Bundle Elements

Process Steps

	Daily assessment/goals	Dressing	Cap change (coordinate with tubing change)	Tubing change (coordinate with cap change)	Accessing the line	Bathing
Process Steps	<p>Discuss in daily rounds/care</p> <ul style="list-style-type: none"> •Necessity of line •Function of line and any problems •Consolidation and elimination of line entries (e.g.change IV medications to PO) 	<ul style="list-style-type: none"> •Perform hand hygiene •Sterile technique <ul style="list-style-type: none"> •Use a kit with sterile gloves •Hair pulled back •Mask those within 3ft of patient •30 second chlorhexidine scrub followed by 30-60 second dry time •Use appropriate dressing (Transparent semi-permeable membrane [TSM] bordered tegaderm) •Write the date changed legibly on the dressing (if date is missing, consider labeling) •Document the date changed in the flowsheet •Assess site every shift <ul style="list-style-type: none"> •If dressing is not clean, dry, and intact, consider changing the dressing <p>Dressing change frequency</p> <ul style="list-style-type: none"> •Q7 days – TSM •Q2 days – Gauze •PRN – Neonatal lines <p>NICU</p> <ul style="list-style-type: none"> •Utilize dressing change team 	<ul style="list-style-type: none"> •Perform hand hygiene •Sterile technique <ul style="list-style-type: none"> •Sterile gloves •Hair pulled back •Mask those within 3ft of patient •Mask patient or lightly cover patient's face/trach with a mask •Remove old cap with sterile gauze using sterile gloves and replace with new cap •Use sterile field ready saline syringe <p>Cap change frequency</p> <ul style="list-style-type: none"> •Q96 hrs for crystalloids/TPN or not in use •Q24 hrs for lipids and blood products •Q7 days for hemodialysis •Q12 hrs for Propofol (post procedure) •Change cap when visibly soiled 	<ul style="list-style-type: none"> •Perform hand hygiene •Aseptic technique (clean gloves) •For intermittent infusion tubing maintain aseptic technique and cap the end of the tubing with a new sterile cap <p>Labeling of tubing</p> <ul style="list-style-type: none"> •Label continuously connected tubing with day to be changed •Label intermittent tubing with day and time to be changed <p>Tubing change frequency</p> <ul style="list-style-type: none"> •Q96 hrs for crystalloids/TPN •Q24 hrs for lipids, intermittent infusions •Q12 hrs for propofol •Per recommendations from the Blood P&P or Pharmacy <p>NICU</p> <ul style="list-style-type: none"> •Utilize standardized tubing change procedure 	<ul style="list-style-type: none"> •Perform hand hygiene •Clean gloves with all product preparation and each line access •Scrub the access areas with sterile alcohol swab for 15 seconds for each line access <p>AND</p> <ul style="list-style-type: none"> •Let completely dry (at least 15 seconds) for each line access •Use sterile field ready saline syringe •Germicidal wipe front of pump every shift •Clean high touch surface areas (e.g. counter and bedside table) with germicidal wipe at least every shift <p>•Coordinate care to minimize line entries</p>	<p>Non-ICU</p> <ul style="list-style-type: none"> •Daily bath/shower •Utilize bathing procedure and protect dressing and tubing during bathing/showering <p>PICU/CICU</p> <ul style="list-style-type: none"> •Daily chlorhexidine (CHG) bath unless contraindicated for all patients over 2 months of age •If a daily bath/shower is requested, give a CHG bath after the regular bath/shower <p>NICU</p> <ul style="list-style-type: none"> •Pre-term infants: Every 3-4 days as tolerated •Term infants: Every 2-3 days as tolerated •Greater than 48 weeks corrected age: Daily chlorhexidine (CHG) bath

Traditional Paper Audits

Braden Q

Patient

MRN

Per bedside RN, were devices repositioned within their shift appropriately? NOTE: Q4 for High Risk

- Yes
- No
- Unable to Audit
- N/A - No device

When assessing this patient, does the patient have a sacral drsg in place?

- Yes
- No
- Unable to Audit
- N/A - Less than 3 years old or pt is ambulatory/mobile

When assessing this patient, are bony prominences other than the sacrum protected by either a Z-flo or Mepilex? NOTE: Having both a Z-flo and Mepilex or having one or the other = Compliant. Additional criteria for ECMO patients: Z-flo and/or Mepilex border should be to back of head and Z-flo or Mepilex border should be protecting the ear from cannula.

- Yes
- No
- Unable to Audit
- N/A - Pt is ambulatory/mobile

When assessing this patient, are the preventative dressings in place correctly under devices (CPAP/BiPAP mask, C-collar, trach, pulse oximeter)? NOTE: Additional criteria for ECMO patients- small Mepilex border should be under the ECMO ear cannula

- Yes
- No
- N/A - Pt does not have a device requiring prophylactic dressing or for ECMO only, patient has a chest cannula

Moving to Electronic Auditing

Electronic Redcap Audit Tool

Daily Assessment

The management and/or elimination of line entries was discussed with team: Ask RN (see blood drawn, in/pm, flushes etc.) Yes No N/A

Daily Assessment Compliant

Daily Assessment Comments

Accessing Line at the Patient

Was hand hygiene performed by RN before all central line care: Ask RN Yes No N/A

Were clean gloves utilized with all line entries and IV preparation? Ask RN Yes No N/A

Was the injection cap scrubbed with sterile alcohol swab for 15 seconds for all line entries: Ask RN Yes No N/A

After the alcohol swab, was the cap let completely dry (at least 15 seconds) for all line entries: Ask RN Yes No N/A

Accessing Line at the Patient Compliant

Dressing General Care

The date documented in agit is within the appropriate dressing change timeframe Yes No

Dressing is clean, dry, and intact Yes No

Appropriate dressing utilized, i.e. TDR bands, 3x2 only if drainage Yes No

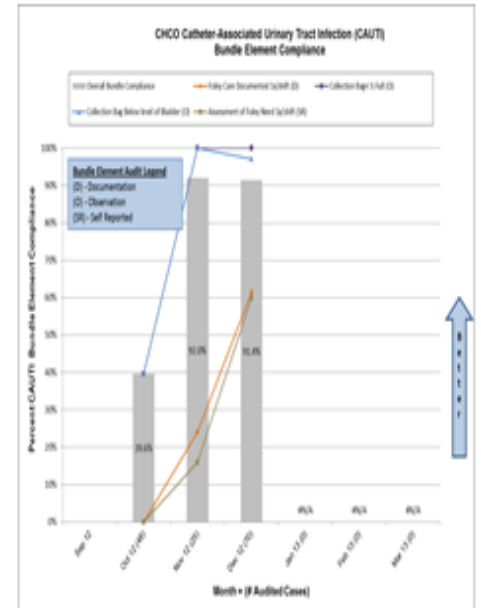

Moving to Electronic Auditing

- Paper audits with manual entry
- Data stored in EDW
- Data displayed in Tableau dashboard

2015 Leader Rounding Dashboard

What is Leader Rounding?

Leader Rounding is an essential, routine activity for all levels of leadership at CHCO. It is focused on discussions, observations and coaching of front line staff where their work is done. The purpose of leader rounding is to ensure team members are effective and engaged in their work, that their barriers are identified, shared, and addressed, and that as a result, outcomes improve. It also enhances visibility and support of leaders for their team members.

Check this box to an additional participant

Selecting a Topic & Searching the Literature

Complete Below (For help with PICO click [HERE](#) for helpful tips)

If you attached your ORRQIRP or COMIRB submission above, you are not required to complete the PICO.

P Patient or Problem – What is the problem and who/what does it involves? Describe what you plan to do. (the purpose/aim/goal). Why are you going to do it? Why is it important?

I Intervention – What are the interventions you are planning to make or what changes are you proposing? How are you going to do it? (the process / methodology)

C Comparison – Will you compare an existing practice or treatment with something else? If so, what is the standard and what is the change?

Outcomes

What data are you collecting?

Does the data you are collecting contain protected health information (PHI)?

How are you collecting this data? Upload survey or data collection tool and/or list all data elements below:

Nursing Project Review Board

OVERVIEW

The Nursing Project Review Board was created to oversee all Research, Evidence-Based Practice (EBP), and Quality Improvement (QI) projects that are lead or supported by Nurses.

The Board will review all submitted Project Tracking Forms to

- ensure adequate resources and support for the project;
- review for duplicative projects;
- track nursing projects within the Division of Nursing and Patient Care Services at Children’s Hospital Colorado; and
- ensure tracking of outcomes and alignment with Organizational Pillar Goals.
