Background:
Intergenerational family relationships in the grandparent-grandchild relationship is an important aspect in society therefore it is significant to study the quality of this bond, since grandparents that have better relationships with their grandchildren, have less risks getting sick, which is important to the discipline of nursing, which is to preserve the health of the elderly.

Purpose:
The purpose of this study focuses on the factors involved in the relationship grandfather-grandson of the students of the Faculty of Nursing."Dr Santiago Valdés Galindo".

Methodology:
The study is descriptive design, for a sample of 170 nursing students. Sampling shall be stratified by grade level.

Inclusion:
Grandparents with which the grandchild has a greater relationship of cohabitation, adults 60 and over who are grandparents, grandparents who have both paternal and maternal grandparents, grandchildren aged 19-30 studying at the Faculty of Nursing and students that have both paternal and maternal grandparents.

Exclusion:
Grandparents and grandchildren who do not meet the established age range, grandparents who have paternal and maternal grandparents but live outside the city of Saltillo, Coahuila; and grandchildren who scored & 30 errors in the Pfeiffer scale.

Elimination:
Grandparents who failed the test of Pfeiffer, grandparents or grandchildren who do not answer entirely the quiz used to apply the study and grandchildren that have both grandparents but ultimately failed to apply the quiz to both of them.

The first unit of analysis will be a quiz for the grandchildren, this quiz measures the perception that grandparents have of the relationship with their grandparents, it contains 22 multiple choice items except questions 6 and 14 which are open questions;

The second instrument is the Pfeiffer, where the unit of analysis is the grandfather, it consists of 10 open questions items to determine the degree of cognition of the elderly;

And finally a third instrument to be applied to the grandparents, 32 multiple choice items, except questions 10 and 14 which are open questions.

The Statistical Package for the Social Sciences (SPSS) version 21 will be used to perform the statistical analysis of each of the study variables. The information obtained will be processed and a correlational descriptive statistics will be performed.

Instruments:
3 measuring instruments shall apply: the first unit of analysis will be a quiz for the grandchildren,

Purpose:
The purpose of this study focuses on the factors involved in the relationship grandfather-grandson of the students of the Faculty of Nursing."Dr Santiago Valdés Galindo".
