

# Affective Pedagogy Empowers Learners to Translate Knowledge for Practice

Presented by

Patricia Bicknell Ed.D., APRN, ACNS-BC, CNL

Priscilla O'Connor Ph.D., PMHCNS-BC,

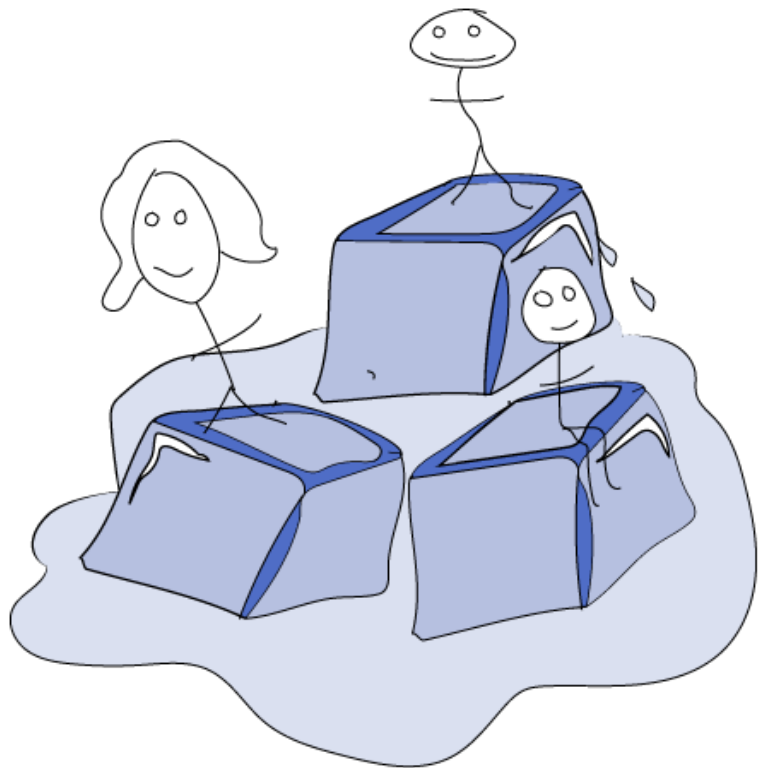

Nicholas Gogno, M.S., PA-Instr.Tech.Cert.

Kappa Delta Chapter

# Aims for Panel Today

- 1) Describe how affective learning strategies can be used to achieve learning goals in EBP Education.
- 2) Discuss application of Roger's Model of Diffusion to build confidence and sustainability in EBP Practice.

# Icebreakers

- Where are you from?
- How long have you been an educator?
- What successes or challenges have you encountered when working with Evidence-Based Practice in your instruction?

# The Role of the Affective Domain in Teaching and Learning for EBP

- Clarify why attention to the affective domain for teaching and learning EBP is effective
- Discuss potential contributions of affective constructs, especially attitude and motivation, for enhanced teaching and learning of EBP

# Common Learning Domains

**affective  
domain**

**cognitive  
domain**

Image by Karin Kirk, SERC

Receiving

- Passive attention to learning

Responding

- Active attention to learning

Valuing

- Internalizes values

Organizing

- Makes meaning

Characterizing

- Value that changes behavior

# Demands of Affective Learning

# Teaching Strategies for the Affective Domain

Why?

Why?

Why?

Why?

Why?

# Why... is EBP Best Taught with Affective Learning Strategies

- Prepares nurses for the future
- Experiential and reflective
- Learning for the “long-term”
- Changed behaviors impact patients/clients

# Goals for Interactive Instructional Design Strategies

- **Identify the Audience and Subject Matter**
  - Faculty, Clinical Nurses, Staff Nurse Educators, and Course Designers
  - Research and Evidence-Based Practice
- **Demonstrate instructional strategies**
  - Identify **theory** behind teaching Iowa Model and Rogers' Diffusions of Innovations Theory
  - Demonstrate **instructional best practices**
  - Demonstrate **strategies and tools**

Who are the staff  
nurses?

# Where are the staff nurses?

- Tertiary care medical centers
- Levels 1, 2 and 3 trauma medical centers
- Cancer centers
- Community hospitals
- Extended care facilities
- Rehabilitation centers
- Primary care medical centers

How do staff nurses  
feel about nursing  
research?

By Nick Gogno, 2013

Unable to resist the temptation to add more participants to his study on alpine skiing, Ralph found the scope of his research snowballing out of control.

# Magnet, Research, and Evidence Based Practice

# Role of Nurse Consultants and Nurse Educators

- Assess the clinical experience of staff nurses
- Stress the importance of clinical experience
- Reinforce nursing practice as the foundation for evidence based practice (and research)
- Reinforce new learning from the past (computer systems)
- Use concepts of research and evidence-based practice in a user-friendly environment.
- Go slowly and reinforce abilities of staff nurses to be successful.  
Disclose past unsuccessful experiences.

The following quiz will first review the Rogers' Model of Diffusion of Innovation and then take you through a case study applying the model. When prompted, choose the best answer for each question and pay attention to the feedback from the quiz. You may take this quiz as many times as you like.

# Application of Roger's Model

Please watch the video overview of the Rogers' Model of Diffusion of Innovations and then drag each term to its best definition in the section below.

Use the scroll wheel on your mouse or the arrows keys on your keyboard to move to the categories at the bottom of the screen while dragging terms.

- Items**
- Rogers' Diffusion of Innovations
  - Diffusion
  - Innovation
  - Communication
  - Time
  - Social Systems

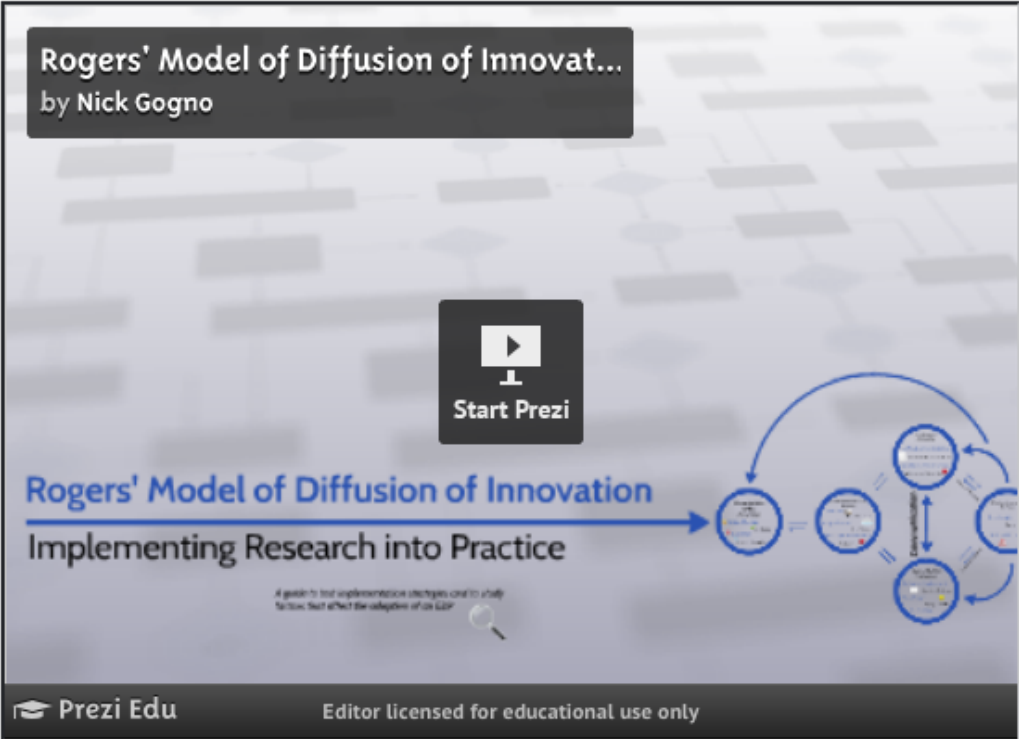

**The process by which an innovation is communicated through certain channels over time among the members of a social system**

**An idea or practice that is thought to be new by a specific individual or group**

- Uses existing videos on YouTube
- Features drag and drop vocabulary exercise
- Mobile compatible
- Created in Qualtrics survey tool

Review the Prezi below for an overview of how the Rogers' Model applies to translating Nursing Research into Practice. Then drag each term to the part of the Rogers' Model to which it best belongs.

Use the scroll wheel on your mouse or the arrows keys on your keyboard to move to the categories at the bottom of the screen while dragging terms.

- Uses Prezi for graphic organizer
- Features drag and drop vocabulary exercise

| Items                    | Characteristics of the Innovation | Communication Process Measures |
|--------------------------|-----------------------------------|--------------------------------|
| Localization             |                                   |                                |
| Orientation of New Staff |                                   |                                |

## Knowledge Stage - Characteristics of the Innovation - Nature of the Topic

In this case, pressure ulcers in hospitalized patients continue to be a significant medical problem despite evidence-based prevention programs and medical advances. In the critical care adult population, there are additional risk factors contributing to pressure ulcer development, some of which are beyond the control of the caregiver. Vasopressor agents, a first line medication for patients with sepsis and/or shock, may cause additional responses compounding the potential for pressure ulcer development.

- Uses Creative Commons images found online
- Features a case study from a case study by Michelle Quigel, R.N.

## Knowledge Stage - Characteristics of the Innovation - Credibility

The innovation of practice in this case involves convincing caregivers to recognize the potential complications relating to vasopressor administration. Often, quality care and best practice measures can reduce hospital acquired pressure ulcers, but do not prevent all from occurring.

Do you want to discontinue administration of vasopressors?

Yes, this will prevent pressure ulcers.

No, consider alternatives changes in practice.

Uses Display Logic in Qualtrics to display next slide based on learner's answer

If learner  
answers yes

Sorry, discontinuation is not feasible for this lifesaving treatment.

If learner  
answers no

Good choice, vasopressors are a lifesaving treatment and often cannot be discontinued. Pressure ulcers may be prevented by increased risk identification and proactive initiation of comprehensive EBP measures.

I know this treatment may seem scary to you, but I assure you it is supported by systemic inquiry and an abundance of knowledge.

# Quantitative Testing

- Volunteer evaluation of models
- Semantic Differential Scale: 15 bipolar adjectives; 7 options
- Stimuli: Iowa Model and Roger's Model
- Evaluation: Honest/Dishonest
- Potency: Relaxed/Tense
- Activity: Rough/Smooth
- Possible range of scores: 15 - 105

# Semantic Differential Results

| Variable               | Mean  | Standard Deviation | Range  |
|------------------------|-------|--------------------|--------|
| Iowa Model<br>(N=26)   | 76.42 | 16.9               | 46-120 |
| Rogers Model<br>(N=24) | 63.58 | 17.2               | 41-101 |

- Response rate = 55 %

# Old Ways of Teaching Research Models

"According to my research, dolphins swim better with humans when you give them food. I'm sure the same principle applies to sharks."

Hmmm...this experiment isn't going well. Maybe I should try this new ingredient I found sitting around in the lab...

# Shift to New Instructional Strategies

**EMPIRICISM  
IN A BOTTLE**

**CONTENTS:**  
Formulation of a question,  
hypothesis, prediction,  
testing, analysis, replication,  
external review, data  
recording and sharing.

**SHAKE WELL.**

# Refresher: Memory

- **Working Memory (WM)** holds 4-5 bits of info and lasts about 10 seconds
- **Long-Term Memory (LTM)** provides long-term storage of info organized into schemas
- **Schemas** are mental structures that incorporate multiple pieces of info into a single framework with a specific purpose or function
- **WM and LTM** interact to help us understand new info.

It's been a few years now since you asked about your cold, but I went back to grad school and I finally have the research to support our treatment plan.

By Nick Gogno, 2013

# Cognitive Load

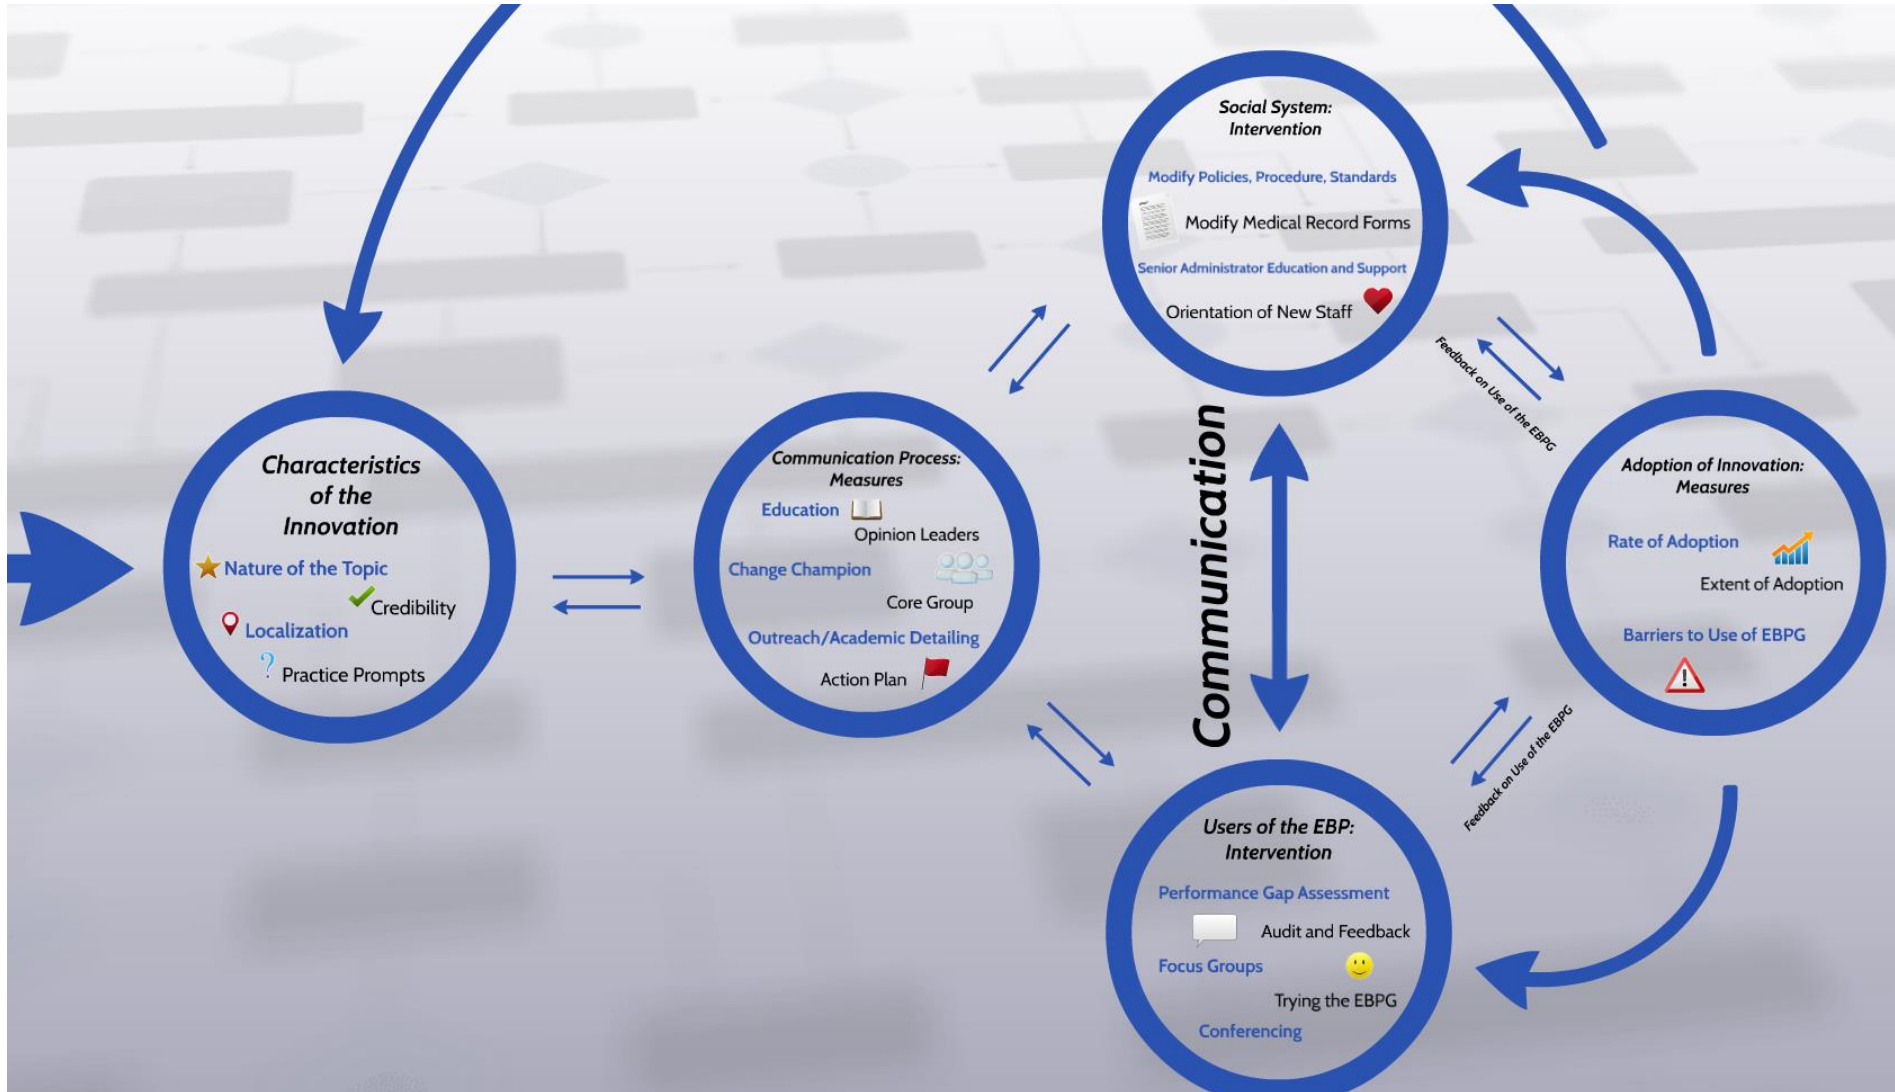

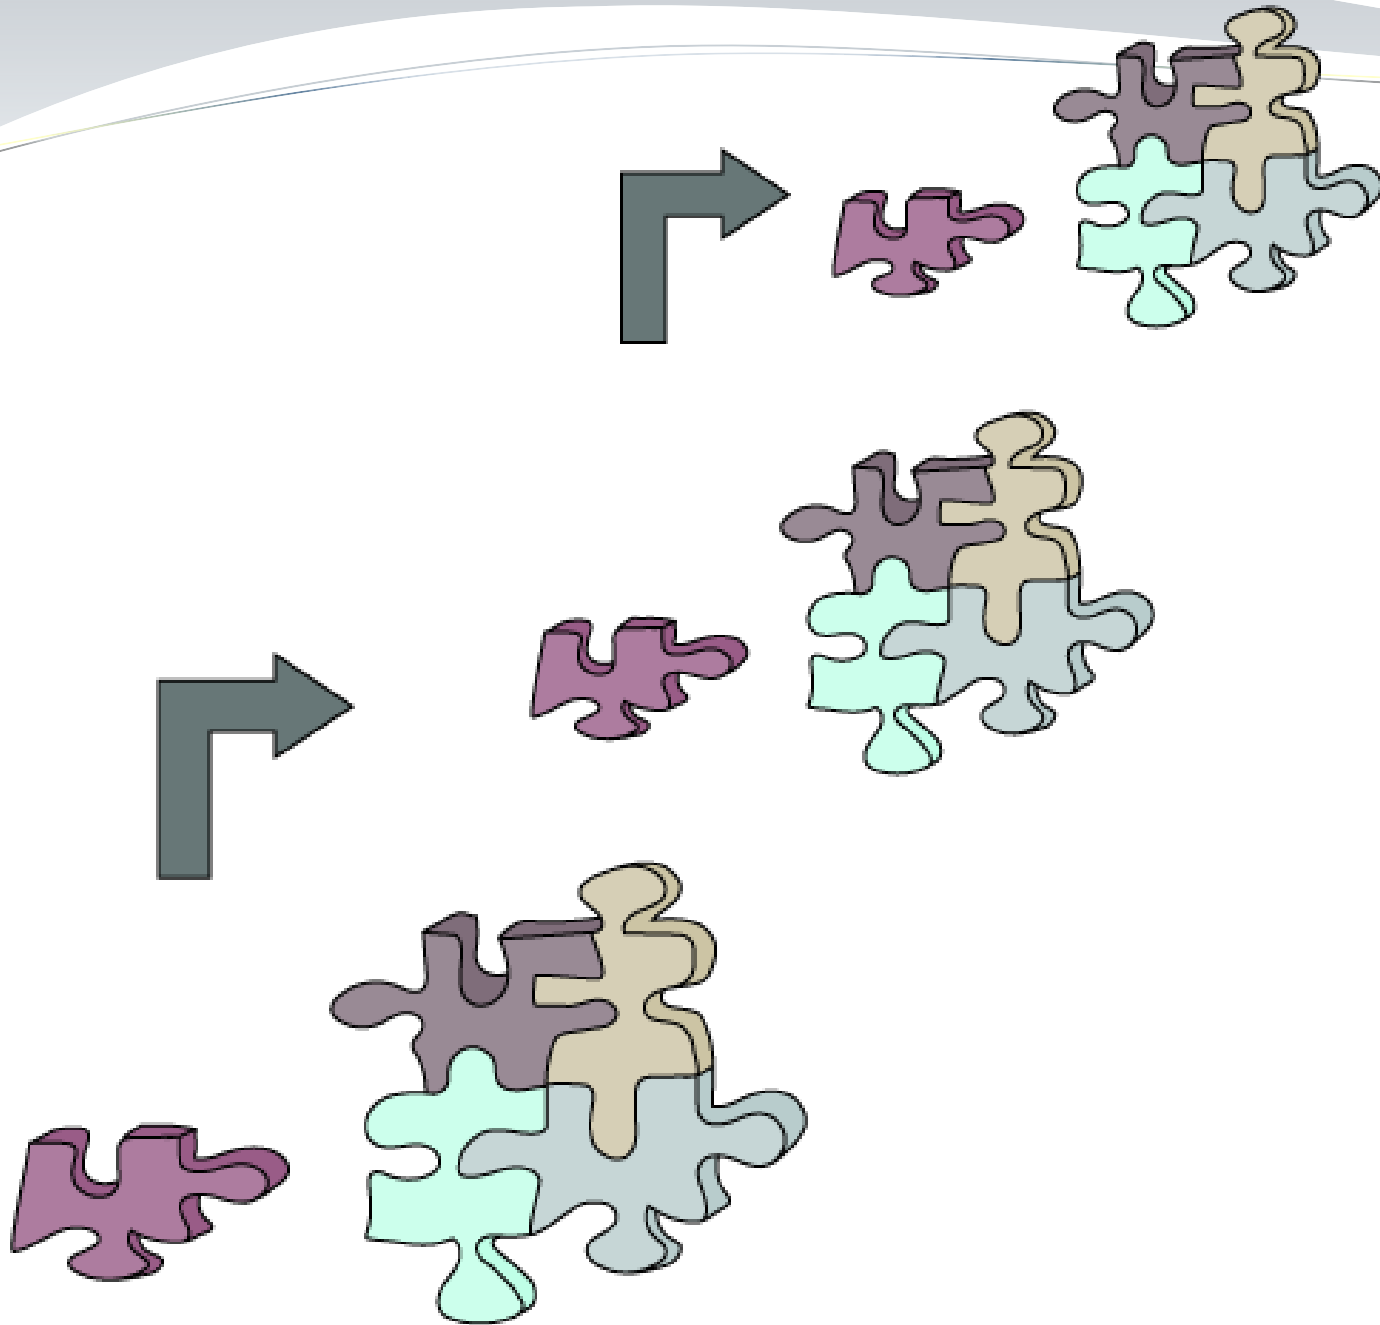

By Nick Gogno, 2013

"It's been sunny everyday for the last 3 months. Logically, there's no need to keep this umbrella any more."

# Challenges for Staff Nurses

# Design Implications

# Tapping Into Existing Knowledge

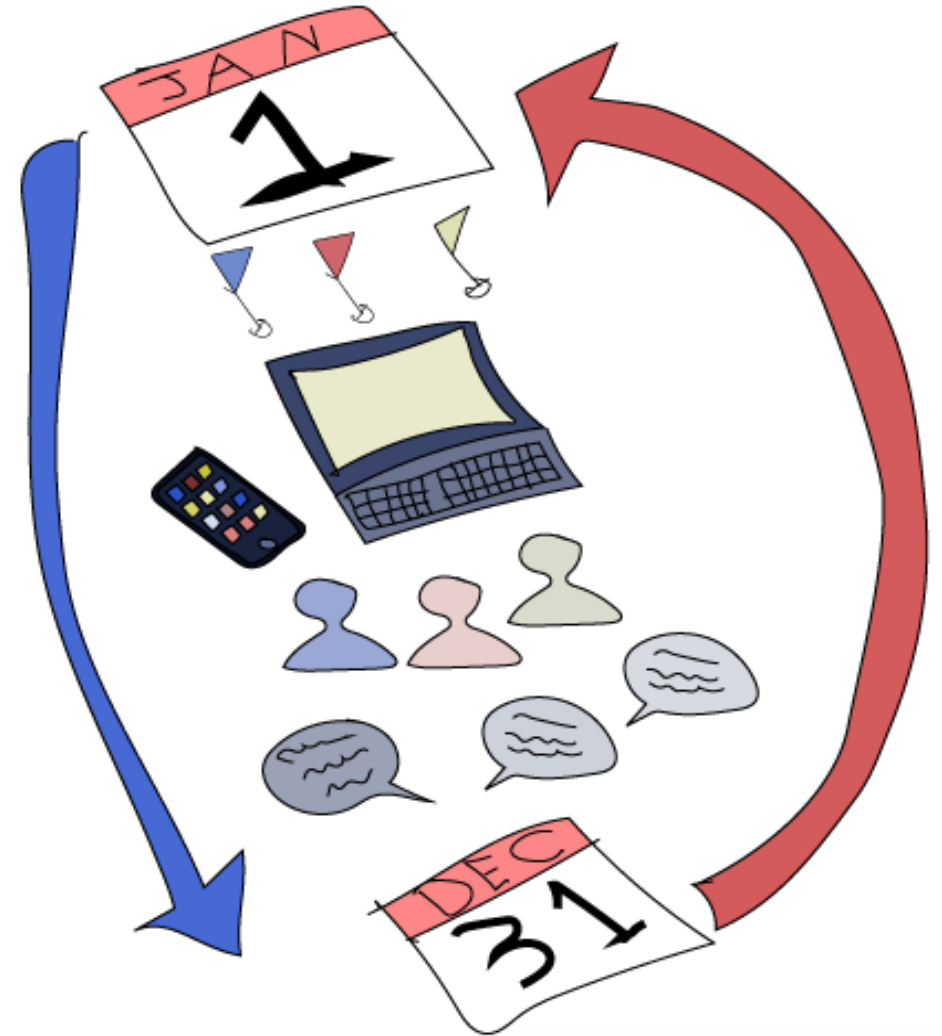

By Nick Gogno, 2013

# Don't Wait! Collect Frequent Feedback

# Conclusions

- Technology must be coupled with intentional design of instruction
- Design well in advance
- Keep instructional goals and learner needs at the forefront
- Collect frequent feedback

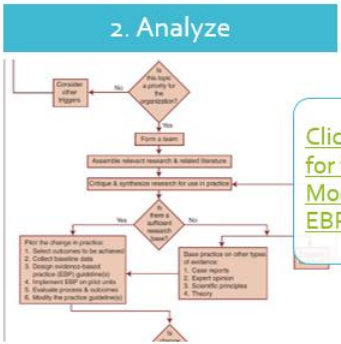

# Application of Iowa Model

Evidence-Based Practice Clinical Scenario Exercise

This is the home page. Proceed through this module in the order of the steps above. Click the return home button at any point during this module to return to this page.

I'm not sure why Farmer John took our feathers, but I'm almost positive lunch is coming soon. I mean he's been feeding us well for months!

No reason to believe the good food won't continue...

By Nick Gogno, 2013

# Questions?
