

Learning Activity:

LEARNING OBJECTIVES	EXPANDED CONTENT OUTLINE
To understand the function of vitamin D and its relation to graft versus host disease. The learner will be able to list two functions of vitamin D.	Vitamin D, an essential hormone with function ranging from mediating bone hemostasis to immune modulation.
Evidence based learning can provide the foundation for improved standards of care. The learner will be able to list two ways the nurse was able to provide evidence.	Based on the two findings about vitamin D, literature search and a retrospective pilot study, a strong evidence base was established to implement a new standard of care.
