

Learning Activity:

LEARNING OBJECTIVES	EXPANDED CONTENT OUTLINE
The learner will be able to identify two evidence based tests used for tuberculosis screening.	The presentation will include a discussion of the two Interferon Gamma Release Assays (IGRA) tests used for tuberculosis screening. Presentation will discuss research findings showing the sensitivity and specificity of IGRA test compared to a Tuberculin Skin Test along with the strength and weaknesses of each test.
The learner will be able to identify barriers to implementation of an evidence based practice and interventions to address the barriers.	The presentation will include a discussion of the barriers encountered during implementation which include issues such as: cost, field safety and lack of adoption by nursing staff. The presentation will also include interventions taken to address the barriers in order to ensure implementation of the evidence based practice by all public health nurse which included local accountability, educational training and staff support.
