

Learning Activity:

LEARNING OBJECTIVES	EXPANDED CONTENT OUTLINE
Participants will be able to describe the cognitive symptom trajectory in cancer patients receiving aggressive immunotherapy over multiple treatment hospitalizations.	The learner will be provided with visual displays/graphs depicting the cognitive symptom trajectory across multiple doses and multiple treatment hospitalizations. Visual displays will incorporate qualitative quotes from the patient, care partner and nurse providing context into the symptom trajectory.
Participants will be able to identify strengths and weaknesses of using a case study approach to examine comprehensive symptom descriptions.	The learner will be provided with the strengths and weaknesses of using a case study approach to understand symptom trajectories. Additionally, the learner will investigate how a case study approach can be beneficial in exploring symptom trajectories in other chronic illness populations.
