Learning Activity:

LEARNING OBJECTIVES	EXPANDED CONTENT OUTLINE
The learner will be able to explain what anti-Müllerian hormone (AMH) is as a measure of ovarian reserve.	Content covered will include the concept of ovarian reserve, AMH as a measure of ovarian reserve, how it compares with other measures of ovarian function, and its current uses in research and clinical practice.
The learner will understand the main factors associated with AMH levels.	Content will include a summary of factors that emerged from the systematic review.
The learner will understand the conceptual models proposed for future hypothesis testing.	Content will include conceptual models developed from the systematic review.
