- **Funding**
  - Taiwan Ministry of Science and Technology (MOST104-2314-B-037-041-MY3).

- **Learner Objectives**
  - To identify the protocol of a newly-developed complementary health practice method, the Healthy Beat Acupunch (HBA) exercise program, for community older adults.
  - To learn the methodology that can be applied to develop an exercise program.
Older adults face threats of physical function declines (Hung & Chen, 2008).

Regular exercise is vital to sustain older adults’ physical functions (American College of Sports Medicine, 2009).

Comprehensive exercise program for older adults should include essential elements of functional fitness, e.g., cardiovascular fitness, muscle strength training, flexibility stretching, balancing, and body coordination (Chen & Lin, 2006).

To select or design exercise programs in accordance with older adults’ capabilities.

Exercises that are novel and have theoretical or culture orientations would elicit interests of older adults (Yeh & Chen, 2004).
Jing-Luo Theory

- Consists of meridians, collaterals, muscle regions, cutaneous regions, and organs that adhere to essential concepts of the Yellow Emperor’s Inner Canon.

- According to TCM, meridians that are connected to the skin through acupoints can regulate/balance the body, transport qi/blood to nurture the whole body.

- Stimulating acupoints by pressing, massaging, punching, or cuffing can excite, suppress, or induce the meridians to facilitate and balance the circulation of qi/blood (Chang, 2009; Zang, 2010).
Acupunch Exercise

- A non-invasive method of **meridian & acupoint stimulations** that emphasize **vibration** rather than beating.
- Vibrations through **hands** to **cuff or tap** every part of the **body along 14 meridians** to transport **qi and blood** (Shaun, 2009).
- Using sudden force on the body to **vibrate meridians & generate heat**, which helps to **circulate qi & blood** and **dredge meridian passages** (Lu & Zhong, 2006).
- The **speed, force, & duration** of acupunch can be **self-determined & adjusted** according to a person’s **physical condition**.
Principles of Acupunch

- Making a hollow fist with a solid grasp, leaving a space with a width of approximately one finger.

- Six punching styles:
  - dragon fist
  - tiger fist
  - trunk fist
  - phoenix fist
  - palm beat
  - back beat

- When practicing acupunch, the wrist, elbow, and shoulder joints are relaxed, using natural swinging to direct the fist onto the targeted acupoint (Shaun, 2008; Shaun, 2009).
Purpose

- To introduce a *newly-developed* acupunch exercise program, called the **Healthy Beat Acupunch (HBA)** exercise program, for older adults in community.
- To describe the *program developmental process.*
Methods

- **Design:** Delphi technique
  - Hard copy + DVD containing detailed descriptions and demonstrations of the HBA program were sent to the experts.

- **Sample:**
  - 16 experts from 8 professionals:
    - 2 geriatric nursing, 2 geriatric medicine
    - 2 sports medicine, 2 physical therapy
    - 2 elderly exercise trainer, 2 social work
    - 2 traditional Chinese medicine
    - 2 community older adults
Preliminary HBA

Program base:

- **Jing-Luo theory** (Chang, 2009; Zang, 2010)
- 3 principles of acupunch (Shaun, 2008; Shaun, 2009)
- Physical fitness guidelines for older adults (Haskell et al., 2007)
- Essential elements of a comprehensive exercise program for older adults (Chen & Lin, 2006)

Program protocol:

- **Phase 1 activating qi & blood**: 5 slow, gentle motions to regulate qi, loosen body, and elevate energy for a safe transition to next phase
- **Phase 2 punching meridians**: 14 low-to-medium speed motions to punch 14 meridians, enhancing cardiovascular-respiratory workout
- **Phase 3 relaxing body & mind**: 5 low-speed, muscle relaxing motions with deep breathing to soothe body & mind
Punching the Shoulders with Phoenix Fist
Punching the Upper Chest with Phoenix Fist
Punching the Outer Arms with Phoenix Fist
Punching the Armpits with Tiger Fist
Punching the Forearms with Dragon Fist
Punching the Center Chest with Palm Beat
Punching the Scapulars with Palm Beat
Punching the Lower Ribs with Palm Beat
Punching the Lower Abdomen with Palm Beat
Punching the Lower Back with Back Beat
Punching the Buttocks with Tiger Fist
Punching the Forelegs with Trunk Fist
Punching the Inner Legs with Dragon Fist
Punching the Outer Legs with Phoenix Fist
Data Collection

- **Evaluation criteria:** (Chen, Tseng, Huang, & Li, 2013)
  - Simplicity
  - Safety
  - Suitability
  - Helpfulness

- **Scoring:** 1 to 4
  - 1 = exercise is very difficult, very dangerous, not suitable, not helpful for health promotion, and should be eliminated.
  - 2 = major revisions should be made to the exercise.
  - 3 = exercise is fine but warrants minor revision.
  - 4 = exercise is simple, safe, suitable, helpful for health promotion, very essential, and should not be omitted.

- The experts were asked to provide suggestions for revisions if they rated ≤ 3.

Conclusions

- 16 experts from 8 professional fields were consistent in evaluating HBA for its simplicity, safety, suitability, & helpfulness.
- Experts only provided minor revision suggestions or teaching reminders for some of the exercises.
- Experts confirmed that the HBA program was feasible to community older adults.
- Based on the experts’ suggestions, the developed HBA program is comprised of 3 phases with 24 motions, and takes 40 minutes to complete:
  - Activating qi & blood (5 motions, 10 minutes)
  - Punching meridians (14 motions, 20 minutes)
  - Relaxing body & mind (5 motions, 10 minutes).
Global nurse practitioners or researchers who are interested in health promotion and/or health maintenance of older adults could further test the effects of the HBA program on older adults in order to disseminate the program as a health promotion activity for older adults in community.
