Nursing education is in the midst of a paradigmatic shift from a traditional, content driven model to one that supports student engagement in the learning process through active teaching strategies. The traditional lecture methodology has proven inadequate to address issues such as content overload, technological advances, an increasingly complex health care environment, and the persistent gap between educational preparedness and clinical practice. Additional challenges include changing student demographics, an exponential increase in new knowledge, and the importance of contextualizing information which raise important questions about the adequacy of traditional teaching approaches. Benner and colleagues (2010) encourage nursing faculty to shift the focus of education from decontextualized knowledge to teaching for a sense of salience. Innovative teaching strategies such as flipped or blended classrooms, scrambled instructional methods, and team-based learning approaches are becoming widely implemented to support a learner centered educational pedagogy. However, the student role change from passive to active learner does not occur without a sense of anxiety associated with the perception of an increased workload and unsettled classroom environments (Rotellar & Cain, 2016). Faculty also may express concerns about content not being covered, a lack of experience with techniques, student dissatisfaction and poor exam scores.

The purpose of this poster presentation is to explore faculty and student perception of the effectiveness of active learning strategies in didactic courses that previously delivered content using a traditional lecture format. Using a quasi-experimental design, a convenience sample of second semester BSN students at a Midwestern university will be asked to complete a 14-item questionnaire on their perception of the effectiveness of active learning strategies, engagement in the learning process and retention of information. The questionnaire will also include 3 open-ended questions on what the student liked, disliked or would change about the teaching methodology. Faculty members who are using innovative teaching strategies in their courses will be asked to complete a questionnaire on the influence of innovative teaching methodologies on student engagement, satisfaction, and performance outcomes.

Title:
Effectiveness of Active Learning Strategies: Student and Faculty Perceptions of Flipped Classrooms and Team-Based Learning

Keywords:
active learning, flipped classroom and nursing education

References:

**Abstract Summary:**

The purpose of this poster is to explore faculty and student perceptions of the effectiveness of active learning strategies such as flipped, blended, scrambled classrooms or team-based learning in BSN nursing education. Student engagement, satisfaction, and efficacy of learning will be assessed.

**Content Outline:**

I. Introduction
   A. Paradigm shift in nursing education
   B. Rationale for teaching/learning strategies
   C. Learner-centric teaching philosophy

II. Innovative active learning strategies
   A. Flipped classroom
   B. Blended/hybrid classroom
   C. Team-based learning
   D. Peer-to-peer learning

III. Methodology
   A. Design: quasi-experimental
   B. Setting: Midwestern university
   C. Participants: BSN students and faculty
   D. Data collection: Questionnaire for students, faculty survey

IV. Results - Data analysis
   A. Demographics
   B. Student perception of effectiveness of active learning strategies
C. Faculty perception of student engagement and learning outcomes

V. Conclusion

**Primary Presenting Author**

Carol J. Bett, PhD, MA, RN
Wichita State University
School of Nursing
Instructor
Wichita KS
USA

**Author Summary:** Dr. Bett is a faculty member at Wichita State University. She teaches Evidence-based Practice and Advanced Nursing Theory classes in both the undergraduate and graduate nursing programs. She also is a clinical instructor in medical-surgical clinical courses. Her areas of research are focused on nursing education and community health projects.

Second Secondary Presenting Author

**Author Summary:** Theresa Cooper is a clinical educator at Wichita State University. She teaches undergraduate nursing courses on Care of the Older Adult and is the course coordinator for Clinical Care of the Adult practicum. She also supervises medical-surgical clinical courses. She has extensive experience in orthopedic nursing.
