Students learn most effectively in environments that facilitate learning by encouraging and supporting them. Unpredictable, unstructured and overwhelming classroom environments can leave students with feelings of vulnerability and anxiety and ultimately contribute to poor learning outcomes. Faculty members bear responsibility for being positive role models and creating positive learning environments where students feel safe in engaging an open of ideas. Although self-awareness of the faculty is the strongest predictor of overall success of the students’ learning in the classroom, no research has systematically examined the faculty’s self-awareness of civil behavior. This study will explore nurse faculty's awareness of their civil behaviors and their impact on creating a positive learning environment.

The objective of the study is to examine nurse faculty’s awareness of their civil behaviors in creating a positive learning environment

An exploratory descriptive research design utilizing an online web-based survey as a means of exploring the perceptions of nurse-faculty of their civil behaviors in the classroom in creating a Positive Learning Environment (PLE). Data will be collected using the demographic questionnaire and “Civility Index for Faculty”, self-report questionnaire consisting of 20 items on nurse faculty’s civil behaviors in creating a PLE.

Descriptive statistics will be conducted to describe the demographic variables and total score of civility. Correlations between demographic variables (age, education, years of nursing experience, years in teaching nursing students); and tests of differences across demographic variables (ethnicity and education) and their awareness of civil behavior in the classroom in creating a PLE.

Findings will reveal how the level of awareness of nursing faculty with regard to civil behaviors in order to create a PLE

We anticipate that this study will provide invaluable information, raise awareness among nurse faculty and determine strengths and to create opportunities for engaging civil behaviors in order to create and enhance a PLE for students.

Title:
Self-Awareness of Civility Among Nursing Faculty in Creating a Positive Learning Environment

Keywords:
Civility, Positive Learning Environment and Student Learning Outcomes
References:

Abstract Summary:
Students learn most effectively in environments that facilitate learning by encouraging and supporting and making them feel they are part of the team. This study focuses on faculty members’ self awareness and how it impacts student learning

Content Outline:
Students learn most effectively in environments that facilitate learning by encouraging and supporting and making them feel they are part of the team. If the classroom environment is unpredictable, unstructured and overwhelming, students can be left with feelings of vulnerability and anxiety. Each faculty member is responsible for being a positive professional role model and setting the best example for students in the classroom for the safe and open exchange of ideas. It is essential for the faculty to be aware of his/her civil behavior in front of students in the classroom. Although self-awareness of the faculty is the strongest predictor of overall success of the students’ learning in the classroom, no research has systematically examined the faculty’s self-awareness of civil behavior.

Objective: To examine nurse faculty’s awareness of their civil behaviors in creating a positive learning environment (PLE).

Method: An exploratory descriptive research design utilizing an online web-based survey as a means of exploring the perceptions of nurse-faculty of their civil behaviors in the classroom in creating a PLE. Data will be collected using the demographic questionnaire and “Civility Index for Faculty”, self-report questionnaire consisting of 20 items on nurse faculty’s civil behaviors in Creating a PLE.

Data Analysis: Descriptive statistics will be conducted to describe the demographic variables and total score of civility. Correlations between demographic variables (age, education, years of nursing experience, years in teaching nursing students); and tests of differences across demographic variables (ethnicity and education) and their awareness of civil behavior in the classroom in creating a PLE.

Results: Findings will reveal how much nurse-faculty are aware of their civil behavior in order to create a PLE.

Conclusion/Implications: It will provide invaluable information, raise awareness among nurse faculty and determine strengths and opportunities for civility improvement in order to create and enhance a PLE for students.

First Primary Presenting Author

Primary Presenting Author
Malliga Jambulingam, PhD, RN
Morgan State University
Nursing Program
Assistant Professor
Baltimore MD
USA

**Professional Experience:** 2015 - Present: PhD Program Coordinator, Morgan State University, School of Community Health and Policy, Nursing Program, Baltimore Maryland 2013 - 2016 Nursing Professor, Radians College of Nursing, Washington, DC 2004 - 2013 Registered Nurse (Maternity), Providence Hospital, Washington, DC

**Author Summary:** Dr. Malliga Jambulingam has more than 25 years of nursing; with a specialty in maternity nursing. The last 14 years, she has also been a nursing educator in some manner.
